Fighters

Prevent Freeze Ups ... Improve Fuel Efficiency

Available for IDF and IDH Oil/Diesel units- installed by factory or in the field

The Optional Heat Recovery System (HRS) from Frost Fighter provides proven peace of mind when dealing with heating applications affected by severe cold, precipitation and condensation.

By drawing heated air from the discharge end, back to a fully enclosed housing designed to retain the warm dry air and shield the fuel pump, filter, Fuel lines & solenoid from the elements provides a high level of insurance against heater downtime ... which equals lost time and money!

In addition, your customers will appreciate the improved fuel efficiency benefit that will take project costs out of their system!

Cold weather is approaching ... check out our library of service/technical videos to ensure your Frost Fighter Heater fleet is ready to go ...
